Recaptha

```
<?php
/**
 * contact_include.php hides the messy code that supports simple.php and multiple
.php
 *
 * These pages provide a postback application designed to provide a
 * contact form for users to email our clients. The code references
 * Google's ReCAPTCHA code as include files and provides all the web service plum
bing
 * to connect and serve up the CAPTCHA image and verify we have a human entering
data.
 *
 * v 2.0 adds support for email headers to avoid spam trap via function, email_ha
ndler()
 *
 * Only the form elements 'Email' and 'Name' are significant. Any other form
 * elements added, with any name or type (radio, checkbox, select, etc.) will be
delivered via
 * email with user entered data. Form elements named with underscores like: "How
_We_Heard"
 * will be replaced with spaces to allow for a better formatted email:
 *
 * <code>
 * How We Heard: Internet
 * </code>
 *
 * If checkboxes are used, place "[" at the end of each checkbox name, or PHP wi
ll not deliver
 * multiple items, only the last item checked:
 *
 * <code>
 * <input type="checkbox" name="Interested_In[]" value="New Website" /> New Websi
te <br />
 * <input type="checkbox" name="Interested_In[]" value="Website Redesign" /> Webs
ite Redesign <br />
 * <input type="checkbox" name="Interested_In[]" value="Lollipops" /> Complimenta
ry Lollipops <br />
 * </code>
 *
 * The CAPTCHA is handled by reCAPTCHA requiring an API key for each separate dom
ain.
 * Get your reCAPTCHA private/public keys from: http://recaptcha.net/api/getkey
```

```

*
* Place your target email in the $toAddress variable. Place a default 'noreply'
email address
* for your domain in the $fromAddress variable.
*
* After testing, change the variable $sendEmail to TRUE to send email.
*
